

## Aquatec Announce 2016 Photo Contest Winner

Following a successful contest, Aquatec Group are pleased to announce that the winner of this year's photo competition is Richard Sheryll with his entry of the Deep Ocean Benthic Sampler collecting benthic boundary layer sediment samples in absence of decompression. The image captures the role of technology in the ocean environment, in the midst of a benthic boundary layer sediment plume. Richard will be taking home a waterproof Polaroid Cube with complimentary accessories.

To mark over 20 years of successful sediment monitoring, this year's theme was Summer of Suspension. Aquatec would like to thank all entrants for their participation and excellent sediment photographs! The images are available on the website at <http://www.aquatecgroup.com/aquatecs-photo-contest>.

### About Aquatec

The Aquatec Group are creators of innovative instruments, services and solutions for measurement, monitoring and communication underwater. They provide instrumentation solutions for all water environments, including offshore structures and pipelines; oceans, estuaries, rivers and lakes; and marine mammals and fisheries. Aquatec was founded by the current Managing Director in 1990 as a specialist consultancy in oceanographic instrumentation design. Since then, the company has established a diverse portfolio of products for measurement of physical oceanographic and process parameters including temperature, depth, vibration, attitude, suspended sediment, and marine mammal activity, as well as underwater data communication systems and marine mammal deterrents.
