FOR IMMEDIATE RELEASE

Wednesday 17<sup>th</sup> June, 2020

# Aquatec Showcases its Cathodic Protection & Monitoring Capabilities in a Virtual Booth

When the organisers of *Corrosion*, the world's largest corrosion conference and exhibition, announced that their 2020 Houston edition would be cancelled due to the COVID-19 pandemic, Aquatec quickly shifted from focusing on a physical stand to a safe and functional alternative that could reach their international customers and friends in the industry.

The firm created a user-friendly platform to show visitors its innovations in subsea engineering as well as some of its offshore cathodic protection and monitoring capabilities, an area in which the company has been active for over 20 years.

The end result is a Virtual Booth that looks and feels like a real stand. The experience starts with a welcome message from the CEO and continues with an invitation to explore the booth and discover which clickable elements either expand on the features of the products, open video presentations or present technical information and corporate literature.

Completely digital, and hosted in the company's website, the booth is open to everyone and can be visited through this one-time link: <http://ow.ly/3WGb50Aa0qU>
